DXV Hawkins:
D1246XXX

Making life healthier, safer and more beautiful at home, at work, and throughout the world.

*American
Standard*

Cast iron can't keep up. Americast® is our revolutionary alternative to cast iron that's more durable, lighter and costs less to install. This traditionally styled, integral-apron bathtub features a beveled headrest, lumbar support and a StanSure slip-resistant surface. Alcove installation.

Americast® is our proprietary, revolutionary alternative to cast iron that's more durable, lighter and costs less to install. Thanks to inherent manufacturing advantages, Americast bathtubs can be made deeper, flatter and roomier than their cast iron counterparts.

Environmental Product Declaration

Cambridge™ Americast® Integral Apron Bathtub

Bathtub

According to
ISO 14025,
21930:2007 &
EN 15804

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.

Product Definition and Information

Production Description

Cast iron can't keep up. Americast® is our revolutionary alternative to cast iron that's more durable, lighter and costs less to install. This traditionally styled, integral-apron bathtub features a beveled headrest, lumbar support and a StanSure slip-resistant surface. Alcove installation.

Americast® is our proprietary, revolutionary alternative to cast iron that's more durable, lighter and costs less to install. Thanks to inherent manufacturing advantages, Americast bathtubs can be made deeper, flatter and roomier than their cast iron counterparts.

Manufacturing Locaton: Salem, OH

Application

Americast Tub products are used in a variety of bathroom applications, including but not limited to hospitality, healthcare, education, government, military, office, and residential settings.

Environmental Activities and Certification

The LIXIL Group promotes conservation of water and raw materials and sustainable practices across the entire lifecycle of our products from inputs, procurement, through use and disposal. On September 17, 2017 LIXIL Group Corporation announced placement in the Dow Jones Sustainability Indices (DJSI) for sustainability performance. LIXIL Group was included in the DJSI Asia-Pacific Index as the highest scoring company in the Building Products Industry, and ranked third globally in this industry group.

Technical Data

For the declared product, the following technical data in the delivery status must be provided with reference to the test standard:

Technical Data

Category	Value
Width	32"
Length	60"
Height	17.875"

Environmental Product Declaration

Cambridge™ Americast® Integral Apron Bathtub
Bathtub

According to
ISO 14025

Market Placement / Application Rules

This product is certified against the following standards:

- ASME A112.19.1
- CSA B45.2

Properties of Declared Product as Delivered

The product arrives to the site of installation packaged in a cardboard box with similar dimensions to the product size stated above. Installation instructions are available online, and additional installation materials may be required.

Material Composition

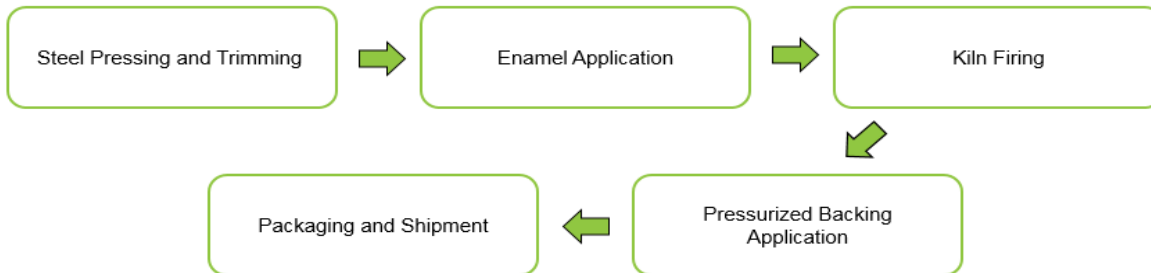

The composition of the Cambridge™ Americast® Integral Apron Bathtub is as follows:

Component	Percentage in mass (%)
Steel	60-75%
Enamel	5-15%
Backing	5-15%
Limestone	1-10%
Other	0-5%
Total	100.00%

Manufacturing

The manufacturing process of Americast Tub products begins with the pressing of a steel sheet into the shape of a tub. The shaped steel is coated with two layers of enamel, which is fired in a kiln. Once cooled, a textured pattern is applied to the floor of the tub. The final steps involves the application of the Americast backing material to the underside of the tub. Finally, the tubs are inspected, packaged, and shipped.

Manufacturing Location(s): Salem, OH

Bathtub

*American
Standard*

According
to
ISO 14025

Environmental and Health During Manufacturing

Lixil is committed to producing and distributing sanitary ceramics and tub products with minimal environmental impact, where health and safety is the primary focus for all employees and associates.

- Environmental operations, GHG, energy, water, waste, VOC, surface treatment and H&S are being routinely monitored. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environment management program effectiveness is evaluated.
- Code of Conduct covers human rights, labor practices, and decent work. Management of Lixil is aware of their environmental roles and responsibilities, providing appropriate training, supporting accountability, and recognizing outstanding performance.
- Any waste metals during machining are separated and recycled. Process water is treated internally before being discharged to municipal wastewater treatment.

Transportation

The product is transported an average of 2696 km to the site of installation via a diesel-powered truck, consuming 32 MJ of diesel fuel.

Installation

The product is installed through a manual installation process, and as such, no noise reduction measures are required. Caulk is used to create a waterproof seal around the edges of the installed product. In some instances, a wax ring may be used to create a secure connection between the product and the existing infrastructure. The installation phase also considers the disposal of packaging materials.

Packaging

These products are packaged with cardboard, paper, and plastic wrap. All of these materials are recyclable.

Use Conditions

For vitreous and tub products, the majority of use phase impacts are the result of cleaning required to maintain the product over its stated reference service life. Operational water and energy use is only included for products that control the flow of water. The majority of vitreous and tub products do not control the flow of water, and therefore have no operational water or energy use impacts. The exception is for one-piece toilets with an integrated flushing system, which do have water and energy use impacts.

Environmental and Health During Use

There is no harmful emissive potential. No damage to health or impairment is expected under normal use of the product.

Environmental Product Declaration

Cambridge™ Americast® Integral Apron Bathtub
Bathtub

According
to
ISO 14025

Reference Service Life

The Reference Service Life is determined by the guidance from the Product Category Rules and varies by product type. This specific product has a RSL of 7.5 years

Extraordinary Effects

Fire

No danger to the environment is anticipated during exposure to fire.

Water

No substances are used which have a negative impact on ecological water quality on contact by the product with water.

Mechanical Destruction

No danger to the environment is anticipated during mechanical destruction.

Re-use Phase

Although it is possible to recycle these products at the end of life, it is not the typical disposal pathway.

Disposal

Final product disposal is modeled as 100% to inert material landfill.

According to ISO 14025

System Boundary

This is a cradle to grave Environmental Product Declaration. The following life cycle phases were considered:

Product Stage			Construction Process Stage		Use Stage							End of Life Stage*				Benefits and Loads Beyond the System Boundaries
Raw material supply	Transport	Manufacturing	Transport from gate to the site	Construction/ installation process	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstruction /demolition	Transport	Waste processing	Disposal	Reuse- Recovery- Recycling potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	MND

Description of the System Boundary Stages Corresponding to the PCR

(X = Included; MND = Module Not Declared)

*This includes provision of all materials, products and energy, packaging processing and its transport, as well as waste processing up to the end-of waste state or disposal of final residues.

Estimates and Assumptions

Transport:

For materials and pre-products, the actual means of transport and distances, provided by the suppliers, were considered.

EoL:

In the End of Life phase, all materials are assumed to be disposed of in a 100% inert material landfill.

Cut-off Criteria

In the assessment, all available data from the production process are considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption, and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available). In case a specific flow contributing less than 1% in mass or energy is not available, worst case assumption proxies are selected to represent the respective environmental impacts. Impacts relating to the production of machines and facilities required during production are out of the scope of this assessment.

Background data

For life cycle modeling of the considered products, the SimaPro 8.2.0.0 software is used. Primary data was collected from the Lixil owned facilities. Secondary data was used for upstream raw material production and downstream inventory flows. This secondary data was sourced from either the Ecoinvent 3.1 or USLCI databases.

Data Quality

The data sources used are complete and representative of North America in terms of the geographic and technological coverage and are a recent vintage (i.e. less than ten years old). The data used for primary data are based on direct information sources of the manufacturer. Secondary data sets were used for raw materials extraction and processing, end of life, transportation, and energy production flows. Wherever secondary data is used, the study adopts critically reviewed data for consistency, precision, and reproducibility to limit uncertainty.

Period Under Review

The period under review is the 2017 Fiscal Year.

Environmental Product Declaration

Cambridge™ Americast® Integral Apron Bathtub

Bathtub

According to ISO 14025

Allocation

Allocation was determined on a mass basis.

Comparability

A comparison or an evaluation of EPD data is only possible if all data sets to be compared were created according to EN 15804 and the building context, respectively the product-specific characteristics of performance, are taken into account. Environmental declarations from different programs may not be comparable. Full conformance with the selected PCR allows EPD comparability only when all stages of a product's life cycle have been considered. However, variations and deviations are possible.

LCA: Modeling Scenarios and Additional Technical Information

The following technical information is a basis for the declared modules or can be used for developing specific scenarios in the context of a building assessment if modules are not declared. Any information omitted from the following scenario tables was done so intentionally as it was unrelated and had no presentable values.

Transport to Building Site (A4)		
Name	Value	Unit
Liters of fuel	38	l/100km
Transport distance	2696	km
Capacity utilization (including empty runs)	90	%
Gross density of products transported	-	kg/m ³
Capacity utilization volume factor	1.00	-

Replacement (B4) / Refurbishment (B5)		
Name	Value	Unit
Replacement cycle	-	Number / RSL
Replacement cycle	9.0	Number / ESL

Installation into the Building (A5)		
Name	Value	Unit
Auxiliary materials	0.70	kg
Water consumption	-	m ³
Other resources	-	kg
Electricity consumption	-	kWh
Other energy carriers	-	MJ
Waster materials at construction site	7.33	kg
Output substance (landfill)	5.87	kg
Output substance (incineration)	1.47	kg
Direct emissions to ambient air*, soil, and water	3.48	kg CO ₂

Operational Energy Use (B6) and Water Use (B7)		
Name	Value	Unit
Water consumption (from tap, to sewer)	-	m ³
Electricity consumption	-	kWh
Other energy carriers	-	MJ
Equipment output	-	kW
Direct emissions to ambient air, soil, and water	-	kg
Further assumptions	*	-

* No associated operational energy or water use

* CO₂ emissions to air from disposal of packaging

End of Life (C1 - C4)		
Name	Value	Unit
Collected separately	-	kg
Collected as mixed construction waste	53.52	kg
Reuse	-	kg
Recycling	-	kg
Energy recovery	-	kg
Landfilling	53.52	kg

Maintenance (B2)		
Name	Value	Unit
Information on maintenance	*	-
Maintenance cycle	390	Number / RSL
Maintenance cycle	3510	Number / ESL
Water consumption (from tap, to sewer)	3.9E-03	m ³
Auxiliary materials (cleaing agent)	0.04	kg
Other resources	-	kg
Electricity consumption	-	kWh
Other energy carriers	-	MJ
Material loss	-	kg

* Daily with 10ml of 1% sodium lauryl sulfate solution

*All use phase stages have been considered, and only maintenance (B2) contains non-zero values, which are reported above. The remainder of use phase stages have values of zero.

Interpretation

The production (A1-A3) life cycle stages drive the results in all impact categories. Within the production phase, raw materials and energy used in the production process drive the impacts. Distribution or installation is typically the second most impactful phase.

Environmental Product Declaration

Cambridge™ Americast® Integral Apron Bathtub

Bathtub

*American
Standard*

According
to
ISO 14025
